- Waveforms from 48 PMTs
 - ▶ Crystals – $2 \times 7 = 14$ PMTs
 - ▶ Veto – 18 PMTs
 - ▶ Muon veto – $2 \times 8 = 16$ PMTs

- Slow control
 - ▶ High-voltage
 - ▶ Environment monitoring
 - ▶ Calibration systems

- Modular design with independent sub-detectors and slow-control systems
- EPICS based control and monitoring

- **Experimental Physics and Industrial Control System**
 - ▶ <https://epics-controls.org/>
- A set of tools that uses client/server techniques to build distributed control systems
- Adds a layer of abstraction between servers (DAQ, slow control, etc.) and clients (UI, archiving, etc.)

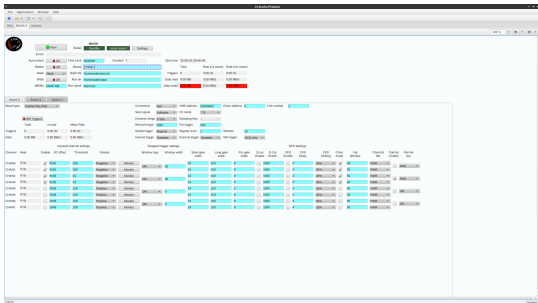

- **Experimental Physics and Industrial Control System**
 - ▶ <https://epics-controls.org/>
- A set of tools that uses client/server techniques to build distributed control systems
- Adds a layer of abstraction between servers (DAQ, slow control, etc.) and clients (UI, archiving, etc.)

Network

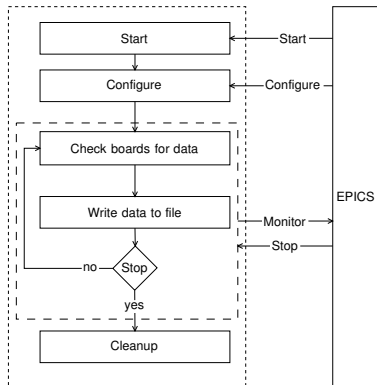

- Utilises existing EPICS clients
- CSS-Phoebus
 - ▶ Custom SABRE UI in development
 - ▶ Common control and monitoring of and Slow control systems
- EPICS Archiver Appliance
 - ▶ Archiving for millions of EPICS variables
 - ▶ Development instance at UniMelb

- CAEN hardware
 - ▶ 5 × 500-MS/s V1730 digitisers
 - ▶ 1 × 3.2-GS/s V1743 digitiser
 - ▶ 1 × V2495 trigger board
 - ▶ 3 × A3818 Fibre optic bridge
- CAEN firmware
 - ▶ 5 × DPP-SUP licenses
 - ▶ 2 × DPP-PSD licenses
- Computers
 - ▶ 3 × Dell 7920 servers for readout
 - ▶ 1 × Dell 7920 servers for storage and processing
 - ▶ 2 × Dell 7920 servers for control and monitoring
 - ▶ 1 × APC Smart UPS

- Custom EPICS server to configure, monitor and readout DAQ
 - ▶ Abstracted control/monitoring
 - ▶ Cross-instance communication
- Developed in C++ at UniMelb
- Modular design
 - ▶ Scalable and flexible
 - ▶ Supports various hardware (digitisers, trigger board etc.)

- CAEN V2495 to manage triggering and synchronisation across digitisers
- Custom VHDL firmware in development at the ANU
 - ▶ Gate-delay-generator
 - ▶ Multiplicity trigger
 - ▶ Calibration trigger
 - ▶ Start signal
- Prototype testing mid-late 2022

- PMT HV
 - ▶ CAEN SY5527 built in EPICS server
- Muon calibration system
 - ▶ Festo stage – EPICS modbus support
- Veto calibration system – TBD
- Environment sensors and fluid handling
 - ▶ NI-cRIO based prototype developed at Swinburne
 - ▶ EPICS + Ethercat system under development at ANU and UniMelb

- Processing and storage for raw SABRE data
 - ▶ Pyrate – Process raw data and convert into a more usable form
 - ▶ Mediaflux – Long-term storage of raw data
 - ▶ Database – Long-term storage of meta-data

- Python package developed for the SABRE experiment to process and analysis event-based data.
- Designed using OO principles and a blackboard design pattern
- Can be used throughout an entire analysis pipeline
 - ▶ Data transformation
 - ▶ Signal processing
 - ▶ Event building and reconstruction
 - ▶ Data analysis
 - ▶ etc.

- Algorithms are black boxes that processes and transform data
- Current algorithms include;
 - ▶ Baseline reconstruction, baseline subtraction, trapezoid filters, constant-fraction discrimination, leading-edge discrimination, charge summation, fast-Fourier transformation, calculation of moments, waveform average, histogram generation, ROOT TTree generation and more!!!

- Store data generated by the SABRE experiment
- Cloud based infrastructure utilising a number of tools
 - ▶ PostgreSQL – DBMS
 - ▶ Django – Data management
 - ▶ Grafana and Prometheus – Monitoring
 - ▶ Apache Airflow – automation and integration
 - ▶ Mediaflux – long-term storage
 - ▶ etc.
- See poster by J. McKenzie

- Performance tests
 - ▶ DAQ, slow control, pyrate
- Detector characterisation
 - ▶ PMTs, Liquid veto, Muon detectors
- Crystal characterisation
 - ▶ NaI-35 – First SABRE-South crystal
- See posters/talks for more details

TDAQ

- Trigger
 - ▶ Finalise design and implementation
- Environment monitoring and slow control
 - ▶ Sensor list
 - ▶ Veto calibration system
 - ▶ Fluid handling system
- Integration with offline computing
 - ▶ Scheduling of data processing
 - ▶ Transfer of data from SUPL to Mediaflux
- Commissioning
 - ▶ Large-scale deployment and testing

Software and offline computing

- Pyrate
 - ▶ Ongoing development
 - ▶ Performance optimisation
 - ▶ Monitoring
- Database
 - ▶ Finalise design
 - ▶ Build infrastructure
- Integration with TDAQ
 - ▶ Scheduling of data processing
 - ▶ Transfer of data from SUPL to Mediaflux
- Commissioning
 - ▶ Large scale deployment and testing
